

Owing to the rising popularity of the bass-guitar, some people has done research in order to find out what is needed to reproduce all the frequencies a bass-player is using, in such a way, that you really "experience" that there is someone playing bass.

To make low notes palpable, you have to move a lot of air.

Our S.A. 4530 S is built for following purpose: Below 150 Hz. this cabinet is acting like a rear

loaded horn which gives you the opportunity to bring the stage in movement and to carry a band. Above 150 Hz. the loudspeaker is acting like a direct radiator to reproduce all the ringing harmonics to add clarity, presence and definition to your own personel sound.

The loudspeaker used in this systems it the JBL E 140, well-known among professional musicians for its reliability, efficiency and ability to handle a great power.

Dimensions model 4530 S : (H x W x D) - 1.080 x 635 x 635 mm.
